

<sup>1</sup>ED visits with primary ICD10 diagnostic code for asthma (J45.X)

$$\text{Sampled \% discharge children with asthma} = \frac{\text{\# sampled asthma cases discharged}}{\text{\# sampled asthma cases}}$$

**Pediatric Asthma Safe Discharge Measure:**

**Quality initiative measure reported as:** % cases of children with asthma discharged from the ED

**Numerator** = Sampled cases of children with asthma discharged from the ED

**Denominator** = Sampled cases of children with asthma

FOOTNOTES: Cases with visit dates prior to Nov 1, 2021 at all sites – regardless of pediatrics only or mixed population – sampled 50 cases with any diagnosis of asthma in the past or current medical history. Beginning w/ Nov 1, 2021 visit dates, pediatric-only sites will sample 85 cases with primary diagnosis of asthma. Beginning w/ Nov 1, 2021 visit dates, mixed-population sites will sample up to 60 cases with a primary diagnosis of asthma. However, if only 40 cases with a PRIMARY diagnosis of asthma are available to be sampled, the remaining up to 20 cases can have asthma in any diagnostic position.
